Introduction

PARK AMARYLLIS IS PROUD TO PRESENT YOU THE FIRST DUTCH AMARYLLIS CATALOG!

Who are we?

Park Amaryllis has emerged from a collaboration between Ludwig & Co. (Ruud Berbee) and HBM (Kees van der Velden) established three decades ago. The company is currently led by Aletta Berbee and Joris van der Velden.

What do we do?

Park Amaryllis has been dedicated to improving amaryllis varieties (hippeastrums) suitable for cultivation in Dutch outdoor conditions. Furthermore, we are dedicated to fostering a sustainable future where these plants rely as little as possible on chemical crop protection products and exhibit low energy consumption during cultivation. In our breeding program, we refrain from using any chemical agents, relying on the natural resistance of the plant, ensuring the resilience of our plants.

What do we produce?

Park Amaryllis cultivates new varieties of amaryllises for various market segments, including cut flowers (page 19), landscaping (page 20), and sales for potted, waxed and dry sales (page 21). Our bulbs grow in sizes ranging from sieve size 20 to sieve size 36, akin to greenhouse and imported bulbs. Starting September, our bulbs are obtainable with BKD certification (Dutch flower bulb health agency). Generally, Class 1 is consistently accessible, allowing for worldwide exportation of the bulbs.

Who cultivates our varieties?

More than 20 selected growers cultivate our varieties.

How can I purchase the Park Amaryllis varieties?

The growers and representatives of, among others, IGH and Floralia are happy to answer your questions. They are well-informed about the prices, quantities per size, and from which year the bulbs are available.

Where can I find more information?

Comprehensive information is available on our website www.parkamaryllis.nl. You can also subscribe to our newsletter there. For purchasers of our bulbs, we offer a dedicated section on our website containing detailed information, including water forcing and other cultivation protocols. If you require a login code, please get in touch with us.

What is included in this catalog?

This catalog contains photos of more than 55 varieties currently in cultivation. Some varieties are available from 2025 onwards. Park Amaryllis provides professional high-resolution photos of all varieties free of charge, which you can use for commercial purposes. You can get in touch with us for more information.

Contact

Discover how our outdoor-grown high-quality Dutch amaryllis bulbs can increase your sales. We are always ready to help you make the right assortment choices and support you in the cultivation and preparation of our amaryllises.

Hydroponic

Production of cut Amaryllis in water.

Park Amaryllis has developed a protocol for forcing cut amaryllises on water trays. Early varieties can be harvested from December 1st. The forcing duration is 3-4 weeks, depending on the greenhouse temperature. The yield ranges from 150 to 250 stems per square meter. If you are interested in forcing amaryllises on water, please contact Park Amaryllis.

Landscape and Garden

Garden Amaryllis

The amaryllises from Park Amaryllis are resistant to various weather conditions. The bulbs withstand frost up to -2°C ; some varieties can even survive temperatures down to -15°C in sheltered garden locations.

This makes our amaryllises highly suitable as garden plants for consumers or to be included in landscaping packages. Consumers can plant the bulbs in borders or use them as patio plants. Another option is for growers to pre-grow the bulbs and sell them as garden plants, similar to, for example, potted agapanthus (see photo bottom left). In the photo top right, amaryllises planted in a garden in Lisse in 2016 are blooming; they bloom again every year around May/June.

Wax, Pot, and Dry Sales

Wax, Pot, and Dry Sales

Park Amaryllis offers a comprehensive range of amaryllises suitable for various sales opportunities and can also assist you with the preparation.

Dry Sales: Bulbs available from early September through spring.

Potted Cultivation - Arrangements - Wax: Bulbs available from early November through spring, delivered with emerging sprout.

The growers and representatives are happy to answer your questions about availability.
